渡部 発表 論文

＜英文原著＞

7) Watanobe H: The immunostaining for the hypothalamic vasoactive intestinal peptide, but not for β-endorphin, dynorphin-A or methionine-enkephalin, is affected by the glucocorticoid milieu in the rat: Correlation with the prolactin secretion. Regul Pept 28:301-311, 1990

8) Watanobe H, Takebe K: Effect of the glucocorticoid milieu on the immunostaining of peptide histidine isoleucine (PHI) in the rat

16) **Watanobe H**, Takebe K: Intravenous administration of tumor necrosis factor-α stimulates corticotropin releasing hormone secretion in the push-pull cannulated median eminence of freely moving rats.

18) **Watanobe H,** Takebe K: A further study on the stimulatory effect of peptide histidine methionine on growth hormone secretion in acromegaly: a dose-related study and a comparison with vasoactive intestinal peptide. *Neuropeptides* 23:115-119, 1992

20) **Watanobe H,** Takebe K: In vivo release of neurotensin from the median eminence of ovariectomized estrogen-primed rats as estimated by push-pull perfusion: Correlation with luteinizing hormone and prolactin surges. *Neuroendocrinology* 57:760-764, 1993

22) **Watanobe H,** Tamura T, Sasaki S, Takebe K: Contradictory clinical implications between paradoxical growth hormone responses to thyrotropin-releasing hormone and those to vasoactive intestinal peptide and luteinizing hormone-releasing hormone in acromegaly. *Neuropeptides* 25:363-375, 1993

24) **Watanobe H,** Tamura T: Stimulation by peptide histidine methionine (PHM) of adrenocorticotropic secretion in patients with Cushing's disease: A comparison with the effect of vasoactive intestinal
peptide (VIP) and a study on the effect of combined administration of corticotropin-releasing hormone with PHM or VIP.

J Clin Endocrinol Metab 78:1372-1377, 1994

42) Habu S, Watanobe H, Yasujima M, Suda T: Different roles of brain
interleukin-1 in the adrenocorticotropic response to central versus peripheral administration of lipopolysaccharide in the rat. *Cytokine* 10: 390-394, 1998

50) Watanobe H, Suda T, Wikberg JES, Schiöth HB: Evidence that physiological levels of circulating leptin exert a stimulatory
effect on luteinizing hormone and prolactin surges in rats. Biochem Biophys Res Commun 263: 162-165, 1999

69) Schiöth HB, Tesfaye A, Mutulis F, Rudzish R, Mutule I, Muceniece R, **Watanobe H**, Wikberg JE: Subtype selective binding properties of

72) **Watanobe H**: Leptin directly acts within the hypothalamus to stimulate gonadotropin-releasing hormone secretion in vivo in rats. *J Physiol* 545:255-268, 2002

79) **Watanobe H**, Hayakawa Y: Hypothalamic interleukin-1β and tumor
necrosis factor-α, but not interleukin-6, mediate the endotoxin-induced suppression of the reproductive axis in rats. 

Endocrinology 144:4868-4875, 2003

87) Caruso C, Durand D, Watanobe H, Lasaga M: NMDA and group 1 metabotropic glutamate receptors activation modulates substance
P release from the arcuate nucleus and median eminence. *Neurosci Lett* 393:60-64, 2006

＜英文総説＞

1) **Watanobe H**: The push-pull perfusion technique as a tool for neuroendocrine research: A review of the present knowledge of in vivo secretion of neuropeptides in the brain. *Current Trends in Experimental Endocrinology* 1: 141-156, 1993

5) Yoneda M, Kurosawa M, **Watanobe H**, Shimada T, Terano A: Brain-gut axis of the liver: The role of central neuropeptides. *J

＜英文症例報告＞

16) Watanobe H, Kawabe H: A case of painless thyroiditis possibly triggered by tamoxifen citrate, a synthetic antiestrogen. J
